Load Testing the Hard Way

(with JMeter and DigitalOcean)

Micah Silverman | Principal Technical Platform Instructor

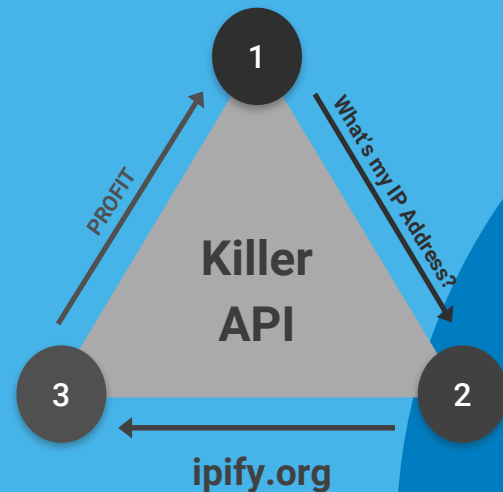

July 12, 2018

Welcome!

- Agenda
 - The Challenge (5 min)
 - Distributed JMeter (5 min)
 - Digital Ocean (5 min)
 - The Solution (5 min)
 - Docker (5 min)
 - Load Testing the Hard Way (20 min)
 - Okta Overview (5 min)
 - Questions (10 min)

The Challenge:

- You expect your killer API to have millions of users.
- You want to make sure that your killer API can handle the traffic.

Professional Load Testing Cost: \$30,000

APACHE

JMeter™

DigitalOcean

JMeter + DigitalOcean

- 200 “users” per JMeter server
- 100 JMeter servers
- JMeter servers could be in different regions
- 20,000 simultaneous requests

100 - 8GB, 4CPU Droplets = $\$0.06 \times 100 = \6 / hour
1 - 8GB, 4CPU Droplet = $\$0.06$ / hour

Total cost for 100,000,000 requests = \$6.06

docker

The Hard Way

The Hard Way Components:

- Spring Boot
- Apache HTTPClient
- DigitalOcean API
- SSH
- Distributed JMeter

The Hard Way Process:

1. Create n DO server droplets
 - a. confirm all created
2. Wait for all server droplets to be active
3. Add all server droplets to firewall
4. Start JMeter on all server droplets
 - a. confirm JMeter started on all
5. Create DO client droplet
 - a. confirm created
6. Wait for client droplet to be active
7. Add client droplet to firewall
8. Push test plan to client droplet
9. Start JMeter on client droplet
 - a. confirm JMeter started

Okta Enables Companies to Secure Both IT & API

Employees,
Contractors

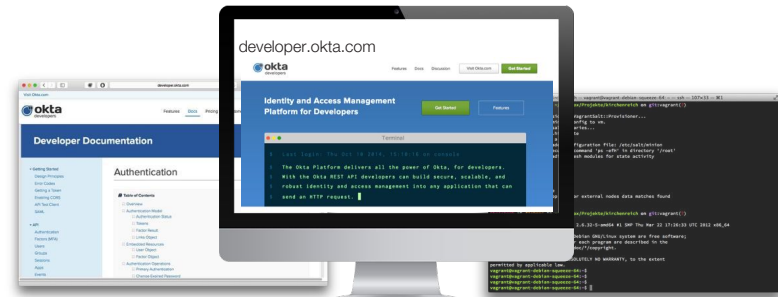

Identity Service:
Identity Management
Strong Authentication

Partners,
Customers

Identity API Products:
Identity API for Any App
Developer Tools
and Community

The image features a blue background with a radial burst pattern of light streaks emanating from the center. Overlaid on this are several semi-transparent blue circles, each containing a white dot in the center, arranged in a grid-like pattern. The Okta logo is centered in the upper half of the image.
